

## ➤ Data Centre Solution Services

### Consultancy

Epsilon will support your business with an independent view to assist in any RFP / RFQ preparations or vendors selection. Where required, we are also able to train your internal staff to understand the most important aspects to consider when planning future data centre developments.

### Site Selection and Design

This is arguably the most important decision you will make in building a data centre. Identifying the correct site to fit with your strategic requirements is critical; as such we can ensure that this is handled appropriately. Epsilon has extensive experience with identifying and overcoming the diverse environmental and geographical challenges of site selection. Coupled with this is our ability to aid your understanding for the design and fit, analysing your requirements not just now but also into the future.

### Data Centre Surveys

An effective and efficient data centre can be the difference between success and failure. Epsilon can maximise its potential through performance surveys which is always conducted using best practice and the latest methodology.

### Operational Support and Procedures

Epsilon will be able to generate clear standards and operating procedures for aspects including: security, access, daily operations, maintenance, and standard operating procedures.

### Implementation and Project Management

Our project team is dedicated to manage the entire project life cycle, ensuring that all facets of the project are identified. Our team of internationally experienced professionals and installers are also trained to integrate with domestic professionals seamlessly. By creating and conveying an understanding between all stakeholders, we can ensure that commitment to delivery is understood and achieved to the highest standard.

### Management Software

With a data centre management software tailored to you individual facility and needs, Epsilon can provide a full system integration with new and legacy technologies for your data centre. 24 x 7 support and continual upgrade release is also included. Customers can take comfort in knowing the facility can be monitored anywhere in the world through a dedicated Service Management Centre.
